

The following are transcripts of videos which will be displayed on the Portal's offering page for the Company.

Video Transcript #1:

"Artificial General Intelligence can be the single most valuable technology that mankind has ever seen. AGI can bring prosperity to everyone in the world. Currently, there is no easy way for different artificial intelligence tools to communicate with each other, trade data and services, and learn from each other. Most of the AI tools are developed within a single company for a single reason. At GenesisAI we envision a completely different world. Our goal is to bring thousands of AI tools to communicate with each other, exchange data and services. For example, we can have a speech recognition model working with a translation model to produce speech translation. This can increase not only the accuracy rate of these tools but also the functionality. We believe this can be the best possible foundation for the creation of artificial general intelligence. Join us in building the future of AI!"

Video Transcript #2:

"Hi, this is Archil of GenesisAI. Genesis AI is a web platform that allows people to discover tests that integrate various AI related APIs – basically an AI/API marketplace. So on the left side you can see a list of apis. As you can see, there are a lot of them here and I love to play with one of my favorite APIs, which is text to art so you can type text. For example, a painting of a robot's bottle in the sky and then AI will be able to generate art based on the text you provided. So we can wait for this. I'll show you my second favorite model which is a YouTube comment so the idea here is we can enter a YouTube video url for example, the new avatar trailer just came out. So I can copy and paste this url, provide it's here and then here I will be able to generate comments that it syncs will receive the highest number of likes. The idea here is to help marketers to boost engagement on their videos and also get attention on commenting on some other videos too. So we can let this run for a couple of seconds as well and I'll show you the second part of the GenesisAI platform, which is allowing developers to deploy their solutions. So we can click on my APIs and then I can add the new API and this whole process is going to follow. This is a really good way for developers who have AI models to extremely easily add their AI API. As you can see, there's a whole process

and there are two ways you can select: one way is to use UI builder and another one is to use an open API. So let's go back to the results. As we can see first this is an image that was produced, which is pretty cool I think, and you guys can experiment on this by yourself. And the second part is YouTube comments, right. For example, this avatar video I mentioned as it seems this actually makes lots of sense, for example it has been a long wait since the last avatar movie came out and these are the type of commands AI syncs that will have the highest amount of generalized amount of likes. And after testing we found that this actually works pretty well, so thank you and hope you'll join our platform."
